# Analysis 2

- 1. Course number and name: 020AN2CI3 Analysis 2
- 2. Credits and contact hours: 6 ECTS credits, 3x1:15 contact hours
- 3. Name(s) of instructor(s) or course coordinator(s): Nancy Chalhoub
- 4. Instructional materials: Course handouts; slides; in-class problems

### 5. Specific course information

## a. Catalog description:

Normed vector spaces: continuity, uniform continuity and Lipchitz continuity, compactness, linear maps, path connectedness – Generalized integrals: tests of convergence, dominated convergence - Functions of several variables: directional and partial derivatives, differentiability, gradient, extrema of functions of several variables, differential forms, multiple integrals, line integrals

- b. Prerequisites: 020AA1CI2 Analysis 1
- c. Required /Selected Elective/Open Elective: Required

## 6. Educational objectives for the course

### a. Specific outcomes of instruction:

- Identify, construct, manipulate, compare and classify norms.
- Study and identify topologies over a normed vector space.
- Identify open, closed, bounded, unbounded, convex, and arc-connected subsets.
- Characterize differentiable and integrable functions.
- Manipulate Lebesgue theorems.

### b. PI addressed by the course:

PI	1.3
Covered	х
Assessed	Х

## 7. Brief list of topics to be covered

- Normed vector spaces: Norms, Geometry of normed vector spaces, topology defined by norms, continuity of applications between 2 normed vector spaces, inner products and norms. (18 Lectures)
- Differential and integral calculus: Derivatives, approximation of function with real variable, integration and differentiation. Taylor formula, Lebesgue convergence theorems, Euler gamma and beta functions. (18 Lectures)
