## **Programming 1**

- 1. Course number and name: 020IF1NI2 Programming 1
- 2. Credits and contact hours: 4 ECTS credits, 2x1:15 contact hours
- 3. Name(s) of instructor(s) or course coordinator(s): Tony Nicolas
- 4. Instructional materials: Course handouts, PowerPoint slides
- 5. Specific course information
  - a. Catalog description:

This course introduces the universal computer and the basic concepts of high-level programming using Python. Topics include: computer hardware components, algorithms, programming languages, Python and the IDLE environment, variables, arithmetic expressions and operators, primitive data types, data input and output, built-in composite data types, simple statements, control statements, logical expressions, relational and logical operators, function definition and call, functions from external modules, and a brief overview on recursive structures.

- b. Prerequisites: None
- c. Required/Selected Elective/Open Elective: Required
- 6. Educational objectives for the course
  - a. Specific outcomes of instruction:
    - Recognize the role of the main computer components.
    - Design algorithms to solve scientific problems.
    - Translate algorithms to computer programs.
    - Define and use variables of different data types.
    - Identify and use the suitable control structure for a particular case.
    - Identify the code to be modularized as functions.
    - Write the definition of a simple function.
    - Identify and analyze a recursive structure.
    - Use a function defined in an external module.
    - Develop a computer program using Python.

## b. PI addressed by the course:

PI	1.2	1.3
Covered	X	X
Assessed	X	X

## 7. Brief list of topics to be covered

- Introduction to computer programming, the elements of the universal computer, binary-decimal conversion (2 lectures)
- Introduction to Python, IDLE, and simple statements using print function and arithmetic operators (1 lecture)
- Variables, expressions, data types, conversion between data types, input function (2 lectures)
- Logical tests and conditional control structures (2 lectures)
- Functions from external modules (1 lecture)
- Iterative control structures (while and for loops) (5 lectures)
- Function definition and call (2 lectures)
- String object and its methods, their traversal, searching through them, selecting elements (3 lectures)
- Lists and tuples and their methods, their traversal, searching through them, selecting elements (4 lectures)
- Dictionaries and their methods, their traversal, searching through them, selecting elements (1 lecture)
- Recursion (1 lecture)
